PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Prostate cancer is the most common cancer among men (after skin cancer), but it can often be treated successfully.	Ok noted.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	Prostate cancer incidence grows worldwide. During the last ten years our knowledge of genetic alterations in prostate cancer has significantly increased. Butl, we lack the comprehensive molecular model for the development and progression of prostate cancer. Only a few genes have been found to be aberrant in a significant proportion of prostate cancer.
