SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	The Introduction section is well written in a good English, showing the importance of such study. The authors were successful in explaining (Material and Methods section) the experimental design of animal study. The results of the present work are relevant, showing that the extract has effects on benign prostatic hyperplasia of prostate induced by testosterone. However, the authors could improve the testis photomicrographs, perhaps by showing all in a single plate to facilitate the reader's understanding. The authors should discuss more about the reproductive toxicity caused by the extract, since it decreases sperm counts and can lead to degeneration of spermatozoa, besides decreasing hormonal levels crucial to reproduction.	
<u>Optional/General</u> comments
