SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	MAJOR REVISION SHOULD BE DONE (AS INDICATED IN THE NOTES IN THE TEXT). ENGLISH REVISION SOULD BE DONE. It is unclear why the authors considered patients with adenocarcinoma, lymphoma, Kaposi ect in the analysis of the greater omentum. Data about positive citology in the peritoneal washing is not considered. The milky spots and the role of greater omentum is very important and not so clear in gastric cancer, however in the discussion and in the aim of the study the topic is not clearly discussed. Is important to know in other countries like south Africa what is the epidemiology of this tumor, however all these aims should be better clarify. Moreover is important specify the role of hipec in these patients, if you use this technique in our center.	
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
