SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	No positive findings: we do not know what the path status of omentum was, so it is not possible to ascertain whether metastasis were overlooked. Data on the preoperative status of the patients are not clear. While it is important to ask the pathologist to search the omentum for malignancies, in the paper there are no data in support of the quest.	
<u>Minor</u> REVISION comments	Most of the tabs are already summarized in the text. Figures repeat data in the tables.	
<u>Optional/General</u> comments	The paper is only a generic quest to pathologists to better analyse the omentum
