SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	In this manuscript, the authors investigated clinic-epidemiological features of pancreatic cancer patients and assess its different prognostic factors. The authors found significant lower survival rate with male gender, high grade disease, older age, PC located in tail and body, high level of CA19-9, and metastatic cases. As they described, this study had the limitations of relatively small number patients and retrospective nature. This is the crucial problem, which this manuscript possesses. Furthermore, there are so many grammatical errors and errors in table 2 to be corrected with inconsistent numeral use of words that it deserves no further consideration of review.	Grammatical errors in table 2 have been corrected
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
