

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Cancer and Tumor International
Manuscript Number:	Ms_JCTI_38860
Title of the Manuscript:	Colon Cancer: Epidemiological And Histopathological Aspects In Cameroon
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The authors need to actually go through the paper and correct all the problems cited in the original review, not just a few of them. For example, the writing was cited as needing careful editing and improvement. The revised paper still contains sentences such as: <i>"The rest colon cancer pathology relatively frequent in Cameroon or it comes in second place among malignant tumors of the digestive tract."</i> I have no idea what that means. The H/F – all of them, not just one – need to be corrected to M/F, the revised paper contains such sentences such as <i>"the sex ratio H / F is 3/2 with almost 95% of patients diagnosed after 50 years [1-3]. Incidence rates vary from continent to continent and high incidence countries are Western Europe, North America, Australia, New Zealand and Japan [4-8]. In France, the sex ratio H/ F is 1.22 with a mean age of diagnosis of 71 years in men and 73 years in women [3, 9, 10]]. In Canada it is the 2nd most diagnosed form of cancer (13% of all cancers combined) with more than 90% of patients older than 55 years; the sex ratio H / F is 1.25 [11, 12]. In Africa the incidence is lower; this is the case of Togo, the sex ratio H / F is 3/2 with an average age of 46.7 years."</i> After citing in the review that HNPCC is NOT a major risk factor for colon cancer in the West, since most cases are sporadic, the revised paper still contains: <i>"However, there are also 2 cases (0.85%) of HNPCC syndrome; This is somewhat different from Western analytic studies, which show that this syndrome is the major risk factor for colon cancer [16, 45]."</i>	OK.
