PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The article is very interesting and useful for practitioners. The case report is very well presented and explained. Expression in English is correct. The authors should write in the chapter discussions about the role of flow cytometry of the cerebrospinal fluid in the diagnosis of lymphoma and in the determination of its type. This examination may differentiate a monoclonal lymphocytosis from a reactive one that is present in meningitis. Among corticosteroids, dexamethasone administered systemically crosses the best the haemato-encephalic barrier.	Thank you for the favourable comment of the importance of this report. The role of flow cytometry has been included in the discussion as seen in lines 200-209. The comment on intravenous dexamethasone is noted and this treatment was administered to the patient.
<u>Minor</u> REVISION comments	References are not very recent.	Some references were changed to similar ones that capture the discussion. Reference 3 was changed and reference 11 was newly added.
<u>Optional/General</u> comments
