PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	<p>In the discussion:</p> <p>Most CBT are asymptomatic at the initial presentation (from 60 to 90%). Cranial nerve dysfunction initially is exceptional.</p> <p>Conventional angiography is rarely used and the imaging technique of choice is CT angiography.</p> <p>Tumour recurrence is rare. In our series of 215 cases, we only had 2 benign and 1 malignant local recurrence (Journal of Cranio-Maxillo-Facial Surgery 2017;45(9):1472-77). In the current case the possibility of a malignant recurrence should have been discussed.</p>	<p>I 100% agreed with all information mention by reviewer. Our case was a malignant one because it a recurrent case with malignant symptoms and sings, we mention that in work up and conclusion.</p> <p>I'll correct every suggestion by reviewer in revised paper.</p> <p>Thank you with regard.</p>
<u>Minor</u> REVISION comments	It is a very unusual case report and I recommend its publication with the suggested corrections.	
<u>Optional/General</u> comments
