

SDI Review Form 1.6

Journal Name:	Journal of Cancer and Tumor International
Manuscript Number:	Ms_JCTI_42759
Title of the Manuscript:	To study and compare the relationship between preoperative serum TSH and frequency of differentiated thyroid cancer
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The authors should discuss that the absence of difference in preoperative TSH levels do not exclude the possibility that TSH is involved in tumor development. In this context, the controversies about the use of TSH suppression in low malignancy thyroid carcinoma should be addressed.	Thank you sir for your valuable comments. The points raised by the reviewer have been added to the discussion column and the same has been highlighted. I hope the comments raised by the reviewer have been relevantly addressed in the edited manuscript.
Minor REVISION comments		
Optional/General comments	The study confirms the finding that TSH levels are not higher in malignant tumors than in benign thyroid tumors.
