

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Cancer and Tumor International
Manuscript Number:	Ms_JCTI_43949
Title of the Manuscript:	Histopathologic Patterns of Urological Malignancies in Calabar, South-southern Nigeria: A Ten-Year Review
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
There is considerable improvement in the write up compared to the initial one sent by the authors. Am impressed with the revised paper at least basic concepts have now been elucidated and expressed. However, I have the following comments: 1. Introduction section line 33: there is nothing like bilharzial infection rather Schistosomiasis or Schistosomal infection. Bilharziasis is just one of the signs of the disease. 2. Your histological photomicrographs started with Figure 2 not Figure 1, kindly rearrange your numbering. Your Figure 4 photomicrograph has not been reflected on the revised, kindly attached that so as to avoid leaving the space empty. 3. I believe a rotary microtome was used to cut the prepared paraffin blocks not any other type of microtome as the authors did not specify rather they only mentioned microtome under materials and methods. Kindly specify what type of microtome was used in the research work because we have many types of microtome. 4. A concise conclusion with a sentence on recommendation will be far better than this long write up on conclusion/recommendations.	Many thanks for all the comments. 1. The correction has been made (Schistosomal infection) 2. There is a Figure 1 already in the document (Histologic Grades of Prostate Adenocarcinoma in the patients). This is numbered Figure 2 as the next figure to avoid confusion in the numbering. Please, there is no Figure 4. The title has been removed 3. A rotary microtome was used to cut the prepared paraffin blocks. This has been added 4. The modification of the Discussion and Conclusion/ Recommendation segments have been made whilst considering also the comments by other reviewers.
