Present Name of the Journal	Journal of Experimental Agriculture International
Manuscript Number:	Ms_AJEA_28893
Title of the Manuscript:	A combination fungicide for the management of blast and sheath blight disease of paddy
Type of Article:	Original Research Article

Request for one technical change with justification

Change required	Justification
In Table1, statistical indicators such as co-efficient of variation (CV) and Critical difference (CD) values are missing in the pooled data analysis column. Therefore, CV and CD values are to be included as mentioned in galley proof	In the original MS submitted to the journal in the beginning, the values of CV and CD are mentioned for pooled data in the table 1. But, one reviewer has suggested for mentioning the PDI values of blast disease before spray in the table 1. While doing modification to the table 1, we by mistake, have mentioned the CV & CD as non significant (NS) and this is a typographical mistake and therefore, we request the editor to consider the corrections as mentioned in the galley proof. For your kind consideration, we have here with attaching the original MS which was communicated in the beginning. I hope this request will be considered and our MS will be accepted in the modified version.
