

SDI Review Form 1.6

Journal Name:	Journal of Experimental Agriculture International
Manuscript Number:	Ms_JEAI_38519
Title of the Manuscript:	Irrigation with Controlled Water Stress and its Effects on Physiology and Phenology of 'Navelate' Oranges
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	A GOOD STUDY	
<u>Minor</u> REVISION comments	ONLY I HAVE A DOUBT, THE TEMPERATURE IS CONTROLLED, SINCE IN THE GRAPHICS, IT SEEMS NOT TO EXIST A SIGNIFICANT VARIATION	The elevation of leaf temperature usually appears as a response to water stress by reducing latent heat loss through transpiration. Although no variations in transpiration have been observed, this usually reduces under these conditions. When this reduction is not apparent, the stomatal conductance may respond to the increase in leaf temperature due to the smaller stomatal opening, which may have limited heat dissipation by the plant, expressing these variations observed.
<u>Optional/General</u> comments	ANY
