

Editor's comment:

Please find attached my decision for manuscript no 2018 JEA 43687. My decision is: Accept after revision as Short research article.

Decision for manuscript number 2018 JEA 43687 entitled 'Ripening banana (Musa spp.) under different conditions' written by Demichaelmax Sales de Melo, José Carlos da Costa, Nelson Correia de Lima Junior, and Severino Ramos da Costa

Following evaluation of all documents related to the manuscript I agree with the Reviewers that the manuscript is acceptable for publishing in Journal of Experimental Agriculture International. However, the manuscript may be accepted only as a Short research article, because is very short and contains results only from one simple experiment.

Although the manuscript was corrected in accordance with suggestions and requirements of the reviewers, additional revision is still needed.

The aim of the research must be clearly formulated at the end of Introduction.

It must be written what statistical analysis was performed. This part of Material and methods was removed from the last version of the manuscript. Why?

According to the Journal requirements COMPETING INTERESTS and AUTHORS' CONTRIBUTIONS should be added.

List of references must be prepared precisely according to requirements of the Journal.

Lines 25-27 must be removed.

Author's feedback:

The aim was inserted.

The statistical analysis performed was inserted.

The COMPETING INTERESTS and AUTHORS' CONTRIBUTIONS was added.

List of references was adjusted.

Lines 25-27 was removed.

We would ask that you make a reference to it by the publication of Original research article.
