

SDI Review Form 1.6

Journal Name:	Journal of Experimental Agriculture International
Manuscript Number:	Ms_JEAI_40090
Title of the Manuscript:	Influence of Vegetation on the Development of Erosion Between Furrows in a Semi-arid Environment
Type of the Article	<u>Review Article</u>

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The manuscript is interesting because reviews the knowledge about a critical problematic due to anthropogenic activities: soil degradation. At the same time, the manuscript review different soil and environmental factors influencing the soil erosion processes and the importance of the native plant communities to avoid the advance of the erosion processes and/or soil restoration. The latter is very important because this research serve as tools for sustainable decision making. Because of that I think that the manuscript must be accepted to be published in the journal, previous some modifications if the authors agree.	
<u>Minor</u> REVISION comments	In general, I think that the redaction and the english must be revised. Some paragraphs are difficult to understand. Although the authors reviewed the factors that affect the processes of soil erosion, there is no description about the process by which these factors have a negative effect on the soil properties. So I think, this aspect needs to be extended. In the same way, I think the authors could add more examples of different regions to explain all the theoretical knowledge of the manuscript. I think these suggestions are necessary to improve a review manuscript.	
<u>Optional/General</u> comments
