SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	Abstract should highlight the objectives and the contributions of the investigation. Literature lacks actuality and relevance. About measuring CSR, the discussion is based on Boone (1984). However, literature shows several different metrics to assess CSR practices and performance. The methodological approach is not presented and the results for each institution are presented using different features, which makes it hard to compare. Discussion is the best part but there are no contributions and no limitations. As matter as fact, we have a comparison between banks of different countries but nor a real problem to solve.	
<u>Minor</u> REVISION comments	The text needs proof reading	
<u>Optional/General</u> comments	As matter as fact, we have a comparison between banks of different countries but nor a real problem to solve. The methodology is not presented. The results and conclusions are, consequently, very limited. Literature rather old, most of it before 2010.
