PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	This article contributes to the relevant discussion on the impact of government investment in the health sector, and how it affects economic growth and vice versa. It argues in a coherent way, with the presentation of empirical data. About your primary goal, there are no comments for review.	
Minor REVISION comments	As a suggestion, I would like to know more about the relationship between government spending on the health sector and its direct relation to per capita income, since I believe that the recommendations are necessary not only for the health sector, but also for higher per capita income to the less affluent.	
Optional/General comments	I congratulate the authors for the initiative and the work done in the article and hope to read other contributions considering this evaluation.
