SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	This study examines the impact of public health expenditure on economic growth n Nigeria from 1986-2014. That is an interesting issues in developing countries. However, the wording of this study is puzzling, the authors should improve and then re-submission. Abstract Some sentences can not be understood, please rewrite. For examples, I can not understand this sentence “ <i>This implies that public health expenditure has that potency to faster economic growth in Nigeria but government health expenditure and per capita income have little or no significant impact of economic growth in Nigerias this may be due to inequitable availability of health care services, poor 16 public and private partnership, poor physical infrastructure and equipment; poor human resources availability and management, inadequate drug supplies, high level of political interference, financial constraints and funds mismanagement, resource allocation and lack of effective regulation or legislation to mention few.</i>” What is the difference between public health expenditure and government health expenditure? The context of this study is no any statement.	
Minor REVISION comments	Line 53, in Page 2 “This trend continues as the expenditure rose steadily form N 575.3 million in 1989 to N68.20 millions 1991 and further to N 72290.07 million and N 98.200 million in 2007 and 2008 respectively (National 54 Bureau of Statistics, 2010).” I totally do not understand this sentence. Some like this wrong sentence have been repeated in the text, please correct all the sentences and then re-submission.	
Optional/General comments
