**PART 1: Review Comments**

|                                            | <b>Reviewer's comment</b>                                                                                                                                                                                                                      | <b>Author's comment</b> <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i> |
|--------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><u>Compulsory</u></b> REVISION comments | The author points out that high-ranking managers involved in privatization participated in the surveys. However, these people can have their own mental models about the topic of the survey and give answers in accordance with these models. |                                                                                                                                                                                             |
| <b><u>Minor</u></b> REVISION comments      | The author should briefly and clearly describe the analyzed model of privatization so that the description does not allow ambiguous interpretations.                                                                                           |                                                                                                                                                                                             |
| <b><u>Optional/General</u></b> comments    | Since the author uses statistical processing, the presence of autocorrelation with the help of Durbin-Watson statistics should be checked.                                                                                                     |                                                                                                                                                                                             |
