

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Economics, Management and Trade
Manuscript Number:	Ms_JEMT_41919
Title of the Manuscript:	Gold Jewellery Demand and Gold Price Volatility: A Global Perspective
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The authors corrected only the minor revision comments and one of the compulsory ones, so I rewrite them here: (1) The Methodology section should contain a table with basic descriptive statistics on all variables used in the model. (2) Please mention the econometric software that was used in the paper (3) I recommend to retest the regression (Table 5) without the constant, C, because it is not statistically significant as the p-value was 0.5804. After that, the independent variables should have an increased correlation with the Gold price volatility and maybe the other two variables, QE and DJI, will have a significant influence too. (4) The results are presented in a descriptive manner (the tests are reported in Table no.) and I would have liked to see an elaborate discussion about them. There are other recent studies that obtained similar results? Or different results? (5) Conclusion section should include a discussion about the limitations of the study and some future research directions. (6) Also, at the line 144 it is written that the paper includes in the last section "the results and policy discussion", but the only mention of the policy is at line 229: " to develop well-tailored policy instruments in a volatile market environment" in the literature review section. I didn't find in the paper a discussion about the policies implications. The author could delete or develop the idea.
