

SDI Review Form 1.6

Journal Name:	Journal of Engineering Research and Reports
Manuscript Number:	Ms_JERR_42820
Title of the Manuscript:	Impact of partially treated wastewater on downstream water quality of Notwane River in Botswana
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Materials and Methods Explain why this period was chosen for research. Give a comparison of the state of measured parameters in the period when the microbial activity is the smallest. Findings The above conclusions are fine but needs to be explained a bit more extensively.	The February-April period is a warm duration and microbial activity is expected to be highest during this time. The June-August period is cool season and microbial activity is the smallest. Unfortunately, measurements were not taken during this time. The conclusions have been beefed-up as advised.
Minor REVISION comments	Image resolution should be better. The version that came up with the review is of poor quality and the images are poorly visible.	The visibility of the figures has been markedly enhanced.
Optional/General comments
