PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>Regarding the types of European synoptic classification, the reviewer's suggestion is that the authors note that there is a large bibliography going through several countries and generations with the adoption of direct and indirect methods, especially those related to the instruments.</p> <p>The reviewer strongly suggests that the authors consider the reading, and possible quotation, of the following article: Neves, G.Z.F.; Gallardo, N.P.; Vecchia, F.A.S. A Short Critical History on the Development of Meteorology and Climatology. Climate 2017, 5, 23. doi: https://doi.org/10.3390/cli5010023</p> <p>It was not possible to identify in the text the data analysis period (period in years).</p> <p>The geographical identification of the European territory was somewhat impaired in figures 4A - 4J. The suggestion is to mention the name of the countries or large European regions.</p>	Thanks a lot to the reviewer for useful comments. They are all corrected.
Minor REVISION comments		
Optional/General comments	There is a very high quality in the description of the article, with objectivity and scientific clarity.
