

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Journal of Materials Science Research and Reviews
Manuscript Number:	Ms_JMSRR_45639
Title of the Manuscript:	Determination of Calorific values of coconut shell and cocoanut husk
Type of Article:	Original research papers

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1. Introduction: This has been slightly reorganised to capture the real essence of it, author (s) could consider this. 2. Materials and methods: Citation of the source (s) of the methods is still lacking 3. Results and discussion: adequate comparism of the results with other scholarly results will enhance this article Note: Details of calculation could be in appendix (ices) 4. References: Acknowledge authors for providing inspiration/documents/sources (some details have been highlighted) 5. Conclusion: Hammer the nail! (check abstract for guide)	1. We do not know what is expected of us here please. 2. Authors did not follow any established protocols from the literature. 3. We have done this but we did not repeat the values from literature but gave the sources. The sources have been indicated as GREEN in the work. This has been done. 4. If we understand this well, we have included an acknowledgement. Some of the highlighted are common knowledge in Ghana. We do not have references for them. Please if you have come across any references they would be very beneficial to us. Equations 1 to 4 were derived by us. We used very little of the oxygen intermitently so as not to interfere with the measurements. As we have already stated, we did not follow any established protocol. 5. This has been done.
