SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>TITLE</p> <p>The title needs to be rephrased, taking into consideration the scope of the study. Current title does not define the scope; “effects” is vague.</p> <p>ABSTRACT</p> <p>All what constitute aims & objective should be titled “background”</p> <p>Background: the aim should be clearly stated, limiting it within the scope of the study; “effects” is vague.</p> <p>INTRODUCTION</p> <p>Same observation in background above.</p> <p>MATERIAL & METHODS</p> <p>I think is ok</p> <p>RESULTS & DISCUSSION</p> <ul style="list-style-type: none"> - It would be better to treat these two as separate sections for clarity. - Table 1: authors need to reorganize data; current presentation is not so informative. Details should be provided such as initial weights and post-intervention weights and, if possible, changes. - Likewise, data contained in tables 2, 3, 4 & 5 should be presented in a single table that categorizes the biochemical data (hepatic enzymes (for ASAT, ALAT...), renal function (for creatinine), lipid profile (for triglycerides, cholesterol...etc.)), groups values, and the statistical results between groups. <p>REFERENCES</p> <p>A handful of references need to be updated.</p> <p>Attn.! I would invite authors to thoroughly revise paper for grammar, with special focus on incomplete sentences. As example from ABSTRACT: “considered 10 animals per group of experimentation”(subject (absent) + predicate)</p>	
Minor REVISION comments		
Optional/General comments
