- This form has total 9 parts. Kindly note that you should use all the parts of this review form.

SDI Review Form 1.6

PART 2: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Compulsory REVISION comments		
Minor REVISION comments	<p>The abstract should be brief, at the "experimental design" is not necessary to place which analyzes were performed. Therefore I suggest that the phrase "Indexes investigated include" is withdrawn.</p> <p>Also not to be quoted in the table at the description of the results of the abstract.</p> <p>In some of the material should be placed on methods the protocol number of the Ethics Committee in animal experimental.</p> <p>Alloxan was used to induce type 1 diabetes, placing data on type 1 diabetes in the introduction.</p> <p>Why had no control group (normal animals) with supplementation of 1% and 2%?</p> <p>The conclusion should be improved, not just a repetition of the results already discussed.</p>	
Optional/General comments
