SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The paper is well-written and the findings are worth-sharing with the scientific community. However, the small sample size appears to pose a bit of a challenge to generalization of findings. But most of the important biomarkers have been duly assessed and therefore can be considered as a preliminary study. Authors must therefore indicate the preliminary or pilot nature of the study to account for the sample-size inadequacies. Also, table 2 should be deleted as table 3 presents the same information. However, a posthoc test must be performed to elicit the information that table 2 was seeking to portray. This will result in a modification of table 3. Some few additional comments have been indicated on the manuscript for further action.	Thank you so much for your commendation. The sample size was calculated based on prevalence of type 2 DM in our locality. It gave us 73 samples and we decided to round it up to 80 subjects. You are perfectly right sir and all the necessary corrections had been made as you advised. Once again, thank you.
Minor REVISION comments		
Optional/General comments
