

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Microbiology Research Journal
Manuscript Number:	Ms_BMRJ_28863
Title of the Manuscript:	Assessment of the synergism of entomopathogenic organisms associated with <i>Zonocerus variegatus</i>
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The article is much better and clear with the author's adjustments. However it still needs some additional corrections to be published as observed below: Introduction: no comments. Justification: The objectives of the work (aim) should be reviewed. Material and methods: See corrections in the text. Results: Don't repeat material and methods information. Tables should have the same format. Evaluation of synergism among entomopathogens: include written result in this part. Discussion: LD50 is not discussed. Conclusion: Ok References: All references must be reviewed according to the BMRJ standards. See yellow highlights in the text.	Justification: Objectives have been reviewed to conform to evaluator's comment. Material and methods: Correction within the texts have been effected Results: Repetitions have been removed Tables have been edited to have the same format Evaluation of synergism among entomopathogens has been included. LD50 is just the minimum number of microbes required to induce pathogenicity in the insects. Extensive discussion might not be required though a few discussion has been newly included too. References: All references have been reviewed according to the BMRJ standards.
