SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	It is big and well referenced article that could be accepted for publication after minor changes. List of references is not organised well especially references on books which are of different style. Please normalize. I'd recommend adding a separate Conclusion section with the main results of the study outlined. Abstract should include the last sentence with conclusion.	
<u>Minor</u> REVISION comments	Antibiotic sensitivity of the Klebsiella isolates to 11 different antibiotics - Sensitivity of the Klebsiella isolates to 11 different antibiotics (Chen et al., 2014a). – a? The third column in Table 1 is confusing. Please organize the references in one line. Now the look like authors belong to one primer and years – to another... Table 2 has no statistical analysis Text under electrophoregrams should include the description of 'M', 'N' and numbers showed by authors.	
<u>Optional/General</u> comments
