FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
I agree with most of the changes made to the document, but I insist to give strength to the results of enzymatic activity it is recommended to attach the cell growth data of the study bacterias. These data can be expressed in absorbance at 600 nm or in colony forming units per mL (CFU / mL) with respect to the same time base used to study the enzymatic activity of the alkylsulphatase.
