SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	RESULTS: Case report the findings of the rest of the anterior segment of the eye and fundus examination findings should also be written in the case report. Line 60 the words “ and was soft on palpation” should be removed from this sentence as it is not related to vision. This sentence should be written separately at the end of the findings of anterior segment of the eye. Line 71 Full form of “ BHI’ should be written. Line 72 ... moderate growth of pleomorphic gram positive bacilli was present. It will be better if a microphotograph of gram positive diphtheroids (if available) is included in the revised paper. REFERENCES: No.5, 6, 7, 8 “et al” is written after 1 author’s name. It should be written after 3 authors’ names. This needs correction .	We added this to the Methodology, instead of putting it in Case Report: The anterior segment shows a formed anterior chamber with clear lens and no hypopyon. The posterior segment showed an attached retina seen through the clear temporal corneal graft We changed “soft on palpation” with The intraocular pressure was 10 mmHg Brain Heart Infusion (BHI) written We apologize for this but we do not have any microphotograph of the Diphtheroids. This has been revised accordingly.
