

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Ophthalmology Research: An International Journal
Manuscript Number:	Ms_OR_30050
Title of the Manuscript:	FAMILY HISTORY OF GLAUCOMA: A PREDICTIVE FACTOR??
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The revised manuscript is corrected in accordance with the reviewer comments. I am not so sure about this paper. The first group is elder than the second one (68.87 + 8.28 instead of 53.87 +9.73), and is logical to have a quite higher intraocular pressure, a deeper Cup and thinner nerve retinal fiber layer. The author must prove that using t-test the statistical difference between the two group. Otherwise the manuscript has no significance	Thank you for this important point. Our area of interest is family history and all the comparisons were on that basis. We accept that our table is very distracting after including age that you also pointed and definitely need to be changed. We have applied independent t test to compare IOP and CDR as dependent variable and family history as independent variable. We now construct a new table. We really appreciate this important point. We will welcome any other comment for the improvement of our article
