SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Cataract surgery number is very low compared to its known incidence. It must be emphasized. Is there a waiting list because of the financial background or is it because of the low number of ophthalmologist? Or the cause is only the relative younger population compared to the European population? What about the rising generation of ophthalmologist? Is there a better future and more ophthalmologist? Do you have some data (number, technique, number of surgeons) about vitreoretinal surgeries? It would be also interesting.	A paragraph discussing this point has been added to the discussion section (page) The number of vitreo-retinal surgeons are seven ophthalmologists, all based in the capital city (Sana'a) and majority of vitreo-retinal cases are done in Yemen except complicated macular surgery that need to travel abroad. This data is from our personal communication and not part of the study.
Minor REVISION comments	Reference list is not unified in its form. Table 1, population number: please add "million"	Reference list unified in its form. Added to the table
Optional/General comments	It is an interesting, concise, logically-structured summary of Eye Care Services in Yemen.
