SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	Interesting article, showing a rare case, and recalling an important differential diagnosis.	
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	<p>1) The authors did no further investigation? As Hardisty AD et al : ("Full blood count, renal and hepatic function tests, erythrocyte sedimentation rate, fibrinogen level and thyroid function tests were all normal. Protein C activity, free protein S, antithrombin 3 activity, antiphospholipid immunoglobulin, anti-dsDNA, anti-nuclear antibody, activated protein C resistance, international normalised ratio, activated prothrombin time and homocysteine levels were all found to be within the normal range. Factor V Leiden and prothrombin 20210A mutations were also excluded.</p> <p>"Int Ophthalmol. 2009 Aug;29(4):303-4.Citalopram-associated central retinal vein occlusion.</p> <p>Hardisty AD, Hemmerdinger CM, Quah SA.)</p> <p>2) Could be important another fundus photo after resolution of the picture, showing complete clearing of vascular tortuosity.</p>	<p>1- Complete Blood picture, Liver function test, ESR was within normal limits Rest of the other lab investigations were not ordered as the patient could not afford for it</p> <p>2- We regret that fundus photo after resolution was not taken at the visit</p>
