SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>Patients and Methods:</p> <p>Inclusion criteria are too wide. Please be more specific with the cases such as what was the minimal and maximal age if there was any, what pathologies were included? what was visual acuity before surgery.</p> <p>Which system was used to do the operation during the surgery ? contact lens or any wide field system?</p> <p>Results:</p> <p>Please specify in numerical values what is high normal and low IOP in tables 1 and 3.</p> <p>Discussion:</p> <p>Please explain why there was such a high rate of postoperative retinal detachments, try to find more references and discuss that.</p> <p>References:</p> <p>Please add at least 5 more references try to add more updated studies preferably from the last 5 years.</p>	<p>We totally agree with all comments.</p> <p>Patients and Methods:</p> <p>We added the age and visual acuity to the exclusion criteria.</p> <p>We added the name of the viewing system (BIOM).</p> <p>Results</p> <p>We specified in numerical values the high, normal and low IOP in tables</p> <p>Discussion</p> <p>We have considered your valuable comment in our revised manuscript.</p> <p>References</p> <p>We have considered your valuable comment in our revised manuscript.</p>
Minor REVISION comments		
Optional/General comments	<p>Nowadays in the western world the most common used are 23G or 25G vitrectomies, yet it is an interesting article, although to my opinion 20G vitrectomy is almost an obsolete technique.</p>	<p>I peripheral areas in Egypt we do not have enough financial support to be updated and use 23G and 25G. So, we are trying to serve our patients by the least cost.</p>
