

SDI Review Form 1.6

Journal Name:	Ophthalmology Research: An International Journal
Manuscript Number:	Ms_OR_40597
Title of the Manuscript:	EFFECT OF CONTRAST SENSITIVITY ON OCULAR DEVIATION
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>This study evaluate if patients with ocular deviation have lower contrast sensitivity.</p> <p>I would not use the word <i>correlate</i> in the purpose, since it corresponds to a statistical term where there is a linear association between 2 variables</p> <p>I recommend using a control group for the study.</p> <p>Extend the statistical analysis using measures of dispersion and association.</p> <p>Expand the discussion by comparing your results with the findings of other studies.</p>	
Minor REVISION comments	<p>Use LogMAR scale to report visual acuity</p> <p>The purpose of graphic 1 and 2 is not clear. It may be simpler to use a table 1 with the population baseline characteristics.</p> <p>I recommend placing the details of informed consent and ethical considerations within methods.</p> <p>References should be marked in the text. Use the same format for all of them</p>	
Optional/General comments		

As per the guideline of editorial office we have followed VANCOUVER reference style for our paper.
