

SDI Review Form 1.6

Journal Name:	Physical Science International Journal
Manuscript Number:	Ms_PSIJ_22112
Title of the Manuscript:	A possible microscopic model for gravitational interaction
Type of the Article	Opinion Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	In this well written Opinion Article it has been proposed that gauge bosons (theoretically predicted to be gravitons) may be produced by the annihilation of mysterious H bosons with their anti-character , just as photons are produced as gauge bosons in the case of electric charge interaction, predicted in quantum electrodynamics. This would be an evidence to explain gravitation mechanism with gravitons in mass charge interaction.	Thanks to the respected reviewer for his/her careful reading of the MS. The idea and opinion are well summarized in the comment and thanks for accepting.
