

**SDI Review Form 1.6**

Journal Name:	<a href="#">Physical Science International Journal</a>
Manuscript Number:	Ms_PSIJ_22017
Title of the Manuscript:	Signs of uncooperative climate also emerging for the Arctic sea ice
Type of the Article	Commentary

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

**SDI Review Form 1.6**

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b><u>Compulsory</u></b> REVISION comments	The manuscript presents an interesting discussion about the low frequency oscillation of the Arctic ice which is disconnected of the mainstream global warming reasoning. The consistent analysis shows a 60 years cycle of Arctic ice expansion/contraction which is a natural variability and has nothing to do with the climate change frenzy. The suggestion is that the manuscript should be considered to publication in order to open a discussion based in more scientific arguments and not in "media science".	
<b><u>Minor</u></b> REVISION comments	No comments	
<b><u>Optional/General</u></b> comments	No comments
