

Editor's Comment:

The review by Dr. Luis Acedo Rodriguez seems to reproduce quite well my personal view about this paper, in which the so-called Allais effect is revisited. An adequate review of the Allais experiment is presented but the author is unable to provide any credible explanation for the unexpected result of such an experiment.

Despite the fact that the content of this paper be completely innocuous, it satisfies the criteria established by PSIJ and, in this case, I have no objection to its publication.
