

SDI Review Form 1.6

Journal Name:	Physical Science International Journal
Manuscript Number:	Ms_PSIJ_30140
Title of the Manuscript:	ON THE GRAVITATIONAL SHIELDING PHENOMENON
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments	In this paper, gravitational shielding by the appearance of a third body weakens the gravitational interaction between two bodies. Allais effect is explained by the idea of this gravitational shielding. It is a new approach for the gravity. There are some studies on shielding theory in gravity. These studies can be referred in the introduction part. It would be more beneficial if the suggested shielding phenomenon could be expressed with a mathematical form.	I expanded the introduction to the article, more convincingly explained the mechanism of the screening gravity and my understanding of the Allais effect. However, at the current level of experimental research it is not possible to propose the corresponding solution for the Allais effect expressed with a mathematical form.
<u>Optional/General</u> comments
