

Editor's Comment:

I have studied the manuscript_PSIJ_31388 "Toy model of evolving quantum cosmology with dark energy" and all the correspondence related to it.

The subject studied in the manuscript is quite difficult and does not have a unique solution. That is why different models are quite suitable. This means that the manuscript could be accepted for publication in the Physical Science International Journal.

Nevertheless, to enhance the article, I would recommend the authors to cite and learn a recent review article on problems in cosmology in which practically all points of views are presented including mutually exclusive ones.
