

**Author's Feedback:-**

My paper is restricted to a discussion of the notion of pentaquark. This matter can be inferred from the paper's title, its abstract and from the entire structure of its text. Evidently, pentaquark is a very specific notion of quark structure which is restricted only to systems that comprise four quarks and an antiquark. On the other hand, the Krasnoholovets article discusses a very large spectrum of properties of the structure and the dynamics of particle physics. Furthermore, pentaquarks are not mentioned in its abstract. Therefore, I think that adding to my paper a discussion of the Krasnoholovets article will not help readers to be focused on my paper's subject.
