

Editor's Comment:

"My decision on the given manuscript is to revise with 'minor revisions'. The manuscript has a lot of grammar, syntax and punctuation mistakes. The major limitation of the study is that there is no discussion made on results and not a single reference was used to justify the authors' findings. So, it is strongly recommended that authors must address all the points and modify the results and discussion part by citing the relevant previous studies to support their facts. Authors did not mention that how data was analyzed? Add that information also."
